

REMARKS

Claims 1-10 are pending. By this supplemental preliminary amendment, claims 1 and 6-10 have been amended to further clarify the recited subject matter and to indicate that the claimed invention covers "credit/charging information", as that term is defined in the specification.

Attached hereto is a marked-up version of the changes made to the specification and claims by the current amendment. The attached Appendix is captioned "Version with markings to show changes made".

Early and favorable action on the merits are respectfully requested.

Respectfully submitted,  
Pillsbury Winthrop, LLP

Enclosure: Appendix

APPENDIX

VERSION WITH MARKINGS TO SHOW CHANGES MADE  
IN THE CLAIMS:

1. (*Twice Amended*) A method for transmitting credit/charging [charging] information to a mobile station, the method comprising:

detecting a call termination of a call chargeable to a subscriber of the mobile station;

sending credit/charging [charging] information to the mobile station as a connectionless message upon the detection of the call termination.

6. (*Twice Amended*) The method of claim 1, further comprising:  
requesting a Mobile Services Switching Centre to report the termination of the call from an Intelligent Network node;

reporting the termination of the call from the Mobile Services Switching Centre; and

determining and sending the credit/charging [charging] information to the mobile station.

7. (*Twice Amended*) The method of claim 1, further comprising:  
executing a Service Logic Program in a Service Logic Execution Environment to send the [charging] credit/charging information at a Service Control Point; and

communicating with an external process through a gateway between services running inside the Service Logic Execution Environment and an external application,

wherein the credit/charging [charging] information is sent using the gateway to the external application and subsequently to the mobile station.

8. (*Twice Amended*) An arrangement for transmitting credit/charging [charging] information to a mobile station in a mobile telecommunications network, wherein the arrangement is configured to detect a termination of a call chargeable to a subscriber of the mobile station and, in response to that detection, send the credit/charging [charging] information to the mobile station as a connectionless message.

9. (*Twice Amended*) The arrangement of claim 8, comprising a Service Control Point of an Intelligent Network, the Service Control Point including a Service Logic Program configured to send the credit/charging [charging] information in response to detection of the call termination.

10. (*Twice Amended*) The arrangement of claim 9, further comprising a separate processor configured to format the credit/charging [charging] information.
